

Kori joined TNC's LANDFIRE Program in 2005 to facilitate the creation of thousands of vegetation dynamic models for ecosystems across the US. She earned undergraduate and graduate degrees in Geography from Western Washington University's Huxley College of the Environment; her graduate research investigated seasonal changes in fire behavior and effects in the dry forests of north central Washington State.

Kori worked as a GIS specialist at the Missoula Fire Sciences Lab and as a wildland firefighter in Washington and Colorado for the NPS and USFS. Her current focus is taking the results of the first five years of the LANDFIRE project and applying the processes and products toward addressing conservation challenges on large landscapes and ecosystems.
