Weather: “prolonged and widespread drought and high temperatures, capped off by a cyclonic storm in early October.”
• Settlement & Industry:
  – **Farming**: clearing of hardwood growth for farm crops; "slash and burn" methods.
  – **Logging**: Slash from the huge, virgin pine forest was intentionally burned, or left in piles in the woods and clearings creating dry tinder for forest fires.
  – **Railroads**: trees and brush cleared from rights-of-way were left by the wayside. In dry weather, sparks from steam engines often ignited grass, brush and slash.
  – **Industry**: Sawmills and factories, with large supplies of raw materials (logs), product (lumber, woodenwares) and waste (bark, sawdust).
  – **Construction**: Wooden buildings, board walks, sawdust floors and streets (Hipke 2001).
